

GENEVISION

Karyotyping Systems

Setting the stage for Automated Cytogenetics.

Genevision takes interactive karyotyping to a new dimension with its wide screen display, unique power mouse, and photographic quality Kodak™ printer.

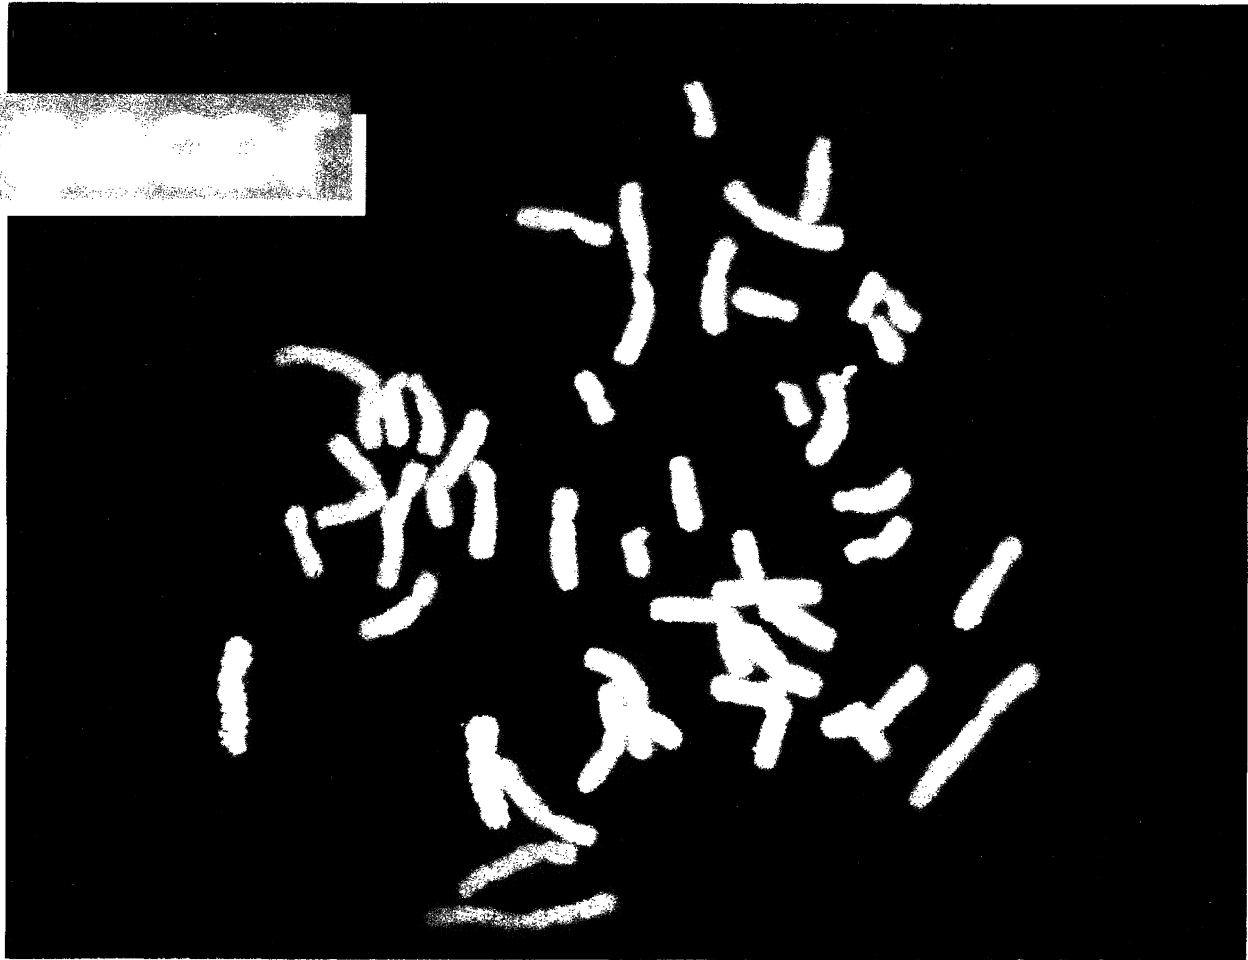

Complete with powerful analytical tools and a number of options for expansion, Genevision is the most flexible karyotyping system available.

- Optional satellite microscope stations and networking allow you to configure Genevision to your needs and expand the system as your laboratory grows.
- New image enhancements have been added for unsurpassed karyotype quality.
 - Our new DNA probe package allows analysis, printing, and archival of molecular cytogenetic studies.
- Telecommunications allows sharing of metaphases and karyotypes between laboratories in different locations.
- Customized leasing programs allow you to put Genevision in your laboratory today.
- Training and support by experienced cytogenetic technologists who assist the laboratory in the transition from manual to automated cytogenetics.

Call us today for more information and a discussion about your laboratory's needs, and see why so many others have chosen Applied Imaging.

Chromosome 8 specific painting probe hybridized to normal human male chromosomes.

LOOK WHO'S PAINTING THE TOWN!

ONCOR'S New Chromosome Painting Probe Family

ONCOR biotinylated chromosome-specific probes are ready to paint in your laboratory! They work brilliantly with either the fluorescence or enzyme detection chromosome *in situ* system.

ONCOR probes may be ordered individually, as you wish, to create your own palette. They're premixed with blocking DNA and suspended in an optimized hybridization solution for your convenience. These probes are for research use only.

ONCOR painting probes may be used to detect whole chromosomes, translocation events and marker chromosomes. Current painting probes are for chromosomes: 7, 8, 10, 11, 14, 16, 17, 18, 22, and X, with more on the way...

**To light up whole chromosomes
with ease, light up our phone.

Isis

An International Review Devoted to the History of Science and its Cultural Influences

Sponsored by the History of Science Society, *Isis* is the oldest and largest circulating journal of the history of science. Each year, its subscribers receive some 800 pages featuring scholarly articles, research notes, documents, discussions, and timely news of the profession. *Isis* offers the largest reviewing service in the field, with review essays by leading scholars and some 300 shorter reviews assessing books from around the world.

A personal subscription brings you complete coverage of all aspects of the history of science, technology, and medicine and their cultural influences, with contributions from notable international authors—both established and emerging scholars. Included with your subscription is the *Isis Current Bibliography of the History of Science and Its Cultural Influences*, an indispensable guide to over 3,000 publications in the history of science and related fields.

Editor: Ronald L. Numbers, University of Wisconsin-Madison

Associate Editors: John Neu, Michael H. Shank, and Rima D. Apple

Published quarterly: the *Current Bibliography* concludes each volume.

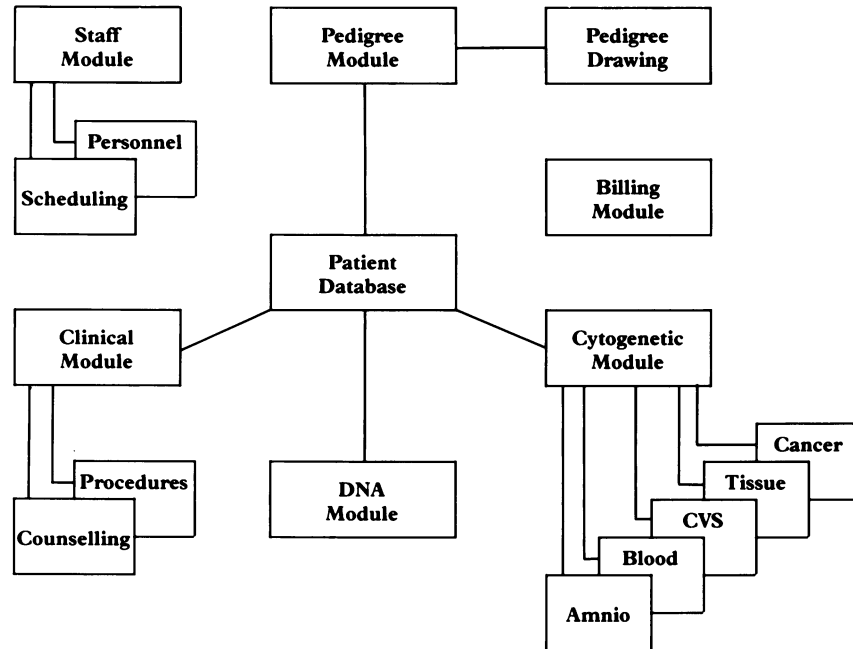

Isis and the History of Science Society

Individual subscriptions to *Isis* and membership in the History of Science Society are concurrent. When you subscribe to *Isis*, your HSS membership also includes the *Current Bibliography*, the quarterly HSS Newsletter, the *Guide to the History of Science* and reduced registration fees at regional and annual meetings. Your membership helps support a number of HSS programs to advance research and teaching in the history of science.

Annual subscription rates/membership dues: \$45 Individuals; \$24 Students; \$110 Institutions. Outside USA, please add \$11 for surface postage and airmail for HSS Newsletter. Canadians please add 7% GST. Visa and MasterCard accepted. To order, send check, purchase order, or complete charge card information (acct. no., exp. date, and signature) to The University of Chicago Press, Journals Division, Dept. SS2SA, P.O. Box 37005, Chicago, IL 60637.

GENETICS

The **GENETIC COMPUTER SYSTEM** comprises a set of software modules providing for the total administrative requirements of a genetic department. Modules are available to match the needs of each installation. The active software user group provides a forum to discuss software enhancements to reflect changes in genetic practises.

The system operates in a multiuser environment which provides fast response and efficient data storage. Computer hardware configurations can vary from a basic PC arrangement to a large minicomputer for over 100 workstations. Hardware configurations can be increased without software changes. Remote locations can be linked. Data from existing systems can be transferred.

The software is installed and full training is given by experienced staff who provide an on-going support service by telephone and dial-up modem connection. Software development tools are included for users to implement their own software modifications in addition to a powerful report generator for the production of ad-hoc reports.

INFECTIOUS DISEASE SPECIALISTS:

Are you receiving thorough coverage of
advances being made throughout the field?

The Journal of Infectious Diseases

Founded in 1904, *The Journal of Infectious Diseases* is the premier publication for original research on the pathogenesis, diagnosis, and treatment of infectious diseases; on the microbes that cause them; and on disorders of host immune mechanisms. Bringing you results from microbiology, immunology, epidemiology, and related disciplines, *JID* keeps you current on new developments in infectious disease research and in your own specialty.

Published monthly with supplements

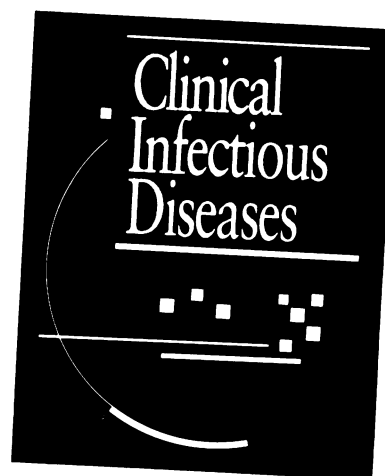

Editor: **Marvin Turck**, Professor of Medicine, University of Washington School of Medicine

Clinical Infectious Diseases (formerly *Reviews of Infectious Diseases*)

Clinical articles in *Clinical Infectious Diseases* provide you with solid research data and incisive commentaries from leading physicians on the diagnosis and treatment of infectious diseases. These articles are especially valuable for physicians because they brief you in the latest techniques to keep your practice up to date. Time-saving review articles in *CID* survey the growing body of published literature in this field. In addition, the supplements to *Clinical Infectious Diseases* focus on recent developments in specific areas of infectious disease research.

Published monthly with supplements

Editor: **Sydney M. Finegold**, Associate Chief of Staff for Research and Development, Wadsworth VAMC, West Los Angeles, and Professor of Medicine and of Microbiology and Immunology, UCLA School of Medicine

Both *JID* and *CID* are sponsored by the Infectious Diseases Society of America and published by The University of Chicago Press.

REGULAR ONE-YEAR SUBSCRIPTION RATES

Combination *JID/CID* subscription: \$144 Individuals; \$331 Institutions; \$125 ASM & IUMS individual members; \$68 Special (students, interns, residents, fellows: attach copy of valid ID). Outside USA add \$36 for postage. Canadians, please add 7% GST.

Subscription rates for either *JID* or *CID* (be sure to indicate which journal you are ordering): \$85 Individuals; \$195 Institutions; \$75 ASM & IUMS individual members; \$42 Special (students, interns, residents, and fellows: attach copy of valid ID). Outside USA add \$18 for postage. Canadians, please add 7% GST.

Airlift delivery service available in January 1993. Add \$46.00 plus postage. (Not available in North America)

MasterCard and Visa payments accepted. To order, send check, purchase order, or complete credit card information (acct. #, exp. date, and signature) to **The University of Chicago Press, Journals Division, Dept. SF3SA, P.O. Box 37005, Chicago, Illinois 60637 USA**

What is your research source for molecular and evolutionary biology?

Molecular Biology and Evolution is devoted to the interdisciplinary effort between molecular and evolutionary biology.

MBE gives you access to the latest research of some of the world's leading molecular biologists, evolutionary biologists, biochemists, and other scientists in the field.

Topics range from biochemistry to bacteriology, from genetics to cellular biology, enabling researchers to reach the right audience and to easily keep current with the latest work by others.

MBE publishes articles that keep you up-to-date on developments at the DNA and protein level, the evolution of enzyme functions, duplicate genes, gene regulation, metabolism development, phylogenies (genes and organisms), and theories integrating these aspects of molecular study.

Individual subscribers will be given memberships in the Society for Molecular Biology and Evolution.

Editor: Walter M. Fitch, University of California-Irvine

Sponsor: Society for Molecular Biology and Evolution

Cosponsors: American Society of Naturalists and Society for the Study of Evolution

DEVELOPMENT

The Molecular Genetic Approach

The immense diversity among living organisms is a truism in biology. However, the molecular genetic study of development is revealing common features as well as a diversity of detailed mechanisms that operate during development. This book recognizes and describes both trends: diversity and commonality in development. The book is organized by model organisms or cell/tissue types and features chapters by many of the world's acknowledged leaders in developmental research. Instructors looking for a fresh perspective on development will find its breadth of coverage and up-to-date data an exciting opportunity for teaching students in developmental biology.

HUMAN CHROMOSOMES

Structure, Behavior and Function Third Edition

The third edition of this successful text provides students, researchers and technicians in the areas of medicine, genetics and cell biology with a concise, understandable introduction to the structure and behavior of human chromosomes. It covers both basic and up-to-date material on normal and defective chromosomes. The mapping and molecular analysis of chromosomes is one of the most exciting and active areas of modern biomedical research, and this book will be invaluable to anyone interested in the function and dysfunction of chromosomes. Reviews of previous editions have described this book as a "gem" and "an excellent text".

THE MAIZE HANDBOOK

This important laboratory manual in plant biology will be an indispensable resource for all students of maize.

Maize has been prominent as a model for research in genetics for many decades, and has a collection of methods and mutants unmatched among plants. New developments in cell and molecular biology have kept maize at the forefront of plant research. This handbook has been compiled by a distinguished group of maize researchers to serve as a community resource. The book presents dozens of current protocols in all areas of maize biology, and includes major sections on development, morphology and cell biology which will be invaluable to workers needing detailed guides to maize at the cell, tissue, and molecular levels.

DROSOPHILA GENETICS

A Practical Course

The fruit fly *Drosophila melanogaster* serves as the classic model for the demonstration of the basic phenomena of genetics. With its easily recognizable genetic markers, it is ideally suited as a test organism for screening substances for toxicity and mutagenicity. This practical course manual includes experiments on formal genetics which can be carried out without expensive equipment. Routine laboratory procedures can easily be established following this manual and it serves as the foundation for performing more sophisticated experiments including techniques of molecular genetics.

1992/239 pp./25 illus./Hardcover \$39.50
ISBN 0-387-54327-9

BIOCHEMICAL GENETICS LABORATORY DIRECTOR

Vivigen Laboratories is seeking an MD or PhD candidate, ABMG certified or board eligible, to direct the Biochemical Genetics Laboratory. The candidate should have experience in human biochemical genetics with emphasis on prenatal screening and diagnosis as well as significant experience in managing a technical production staff.

Vivigen's high quality, state-of-the-art laboratories are located in the city of Santa Fe in Northern New Mexico which offers clear skies, no congestion, spectacular sunsets and a wide variety of social and outdoor activities.

Please send CV to:

David H. Lockwood, PhD.
Vivigen, Inc.
2000 Vivigen Way
Santa Fe, NM 87505

Vivigen is an equal opportunity employer.

THE UNIVERSITY OF CHICAGO

Faculty Position

Full-time faculty position at the rank of Associate Professor/Professor as the

DIRECTOR OF THE SECTION OF GENETICS

for the Department of Obstetrics and Gynecology at the University of Chicago Hospitals. Candidates need to be Board-certified (or an active candidate for Boards) in Obstetrics & Gynecology, and in Human Genetics. This is an Academic Track faculty position with opportunities to pursue basic molecular and/or clinical research in genetics. Section currently staffed by faculty including an M.D. geneticist, and two Ph.D.'s who direct the Molecular Genetics and Cytogenetics laboratories.

Send curriculum vitae and the names of references to:

Arthur L. Herbst, M.D.
Department of Obstetrics/Gynecology
5841 S. Maryland Avenue/MC 2050
Chicago, IL 60637

**THE UNIVERSITY
OF CHICAGO**

An Affirmative Action Equal Opportunity Employer

DIRECTOR OF GENETICS

The Department of Pediatrics, Northwestern University Medical School and the Children's Memorial Institute for Education and Research (CMIER), seek candidates for the position of Director, CMIER Human and Molecular Genetics Program and Head, Division of Genetics at Children's Memorial Hospital. The individual occupying this post will be expected to develop an internationally recognized research program, oversee the clinical genetics service and participate in graduate education. This position will be endowed by the Given Research Chair in Pediatrics and generous support will be available to establish the research and clinical programs.

The Children's Memorial Medical Center and Northwestern University Medical School are equal opportunity employers. Women and minority candidates are urged to apply. The closure date for all applications will be January 15, 1993. Please send letters of inquiry to:

Bernard L. Mirkin, Ph.D., M.D. and A Todd Davis, M.D.
Co-Chairs, Genetics Program Search Committee
The Children's Memorial Medical Center
2300 Children's Plaza
Chicago, Illinois 60614

Department of Human Genetics Memorial Sloan-Kettering Cancer Center

The newly established Department of Human Genetics at Memorial Sloan-Kettering Cancer Center is inviting applications for faculty positions. Both senior and junior level appointments will be made in the areas of molecular genetics, genetic epidemiology and genome analysis. A focus of the recruitment will be in the area of the genetics of human cancers, although qualified applicants with research interests in other human genetic diseases and relevant animal models are encouraged to apply. The Department will occupy new research laboratories on a campus which includes outstanding established basic research and clinical departments.

Interested applicants should forward their curriculum vitae, bibliography and the names of three references to:

Jeffrey V. Ravetch, M.D., Ph.D.
Chairman, Human Genetics Search Committee
Memorial Sloan-Kettering Cancer Center
1275 York Avenue, New York, New York 10021

An Equal Opportunity/Affirmative Action Employer

**Clinical Director
Center for Human Genetics and Department of Genetics
Case Western Reserve University School of Medicine
University Hospitals of Cleveland**

The newly established Center for Human Genetics invites applications for a Clinical Director who will be responsible for organizing and directing the clinical genetics services at University Hospitals of Cleveland, including Rainbow Babies and Childrens Hospital, both affiliated with Case Western Reserve University School of Medicine. The Clinical Director must be a diplomate of the American Board of Medical Genetics and will assume responsibility for the clinical service, including diagnostic laboratories for Clinical and Molecular Cytogenetics (Dr. S. Schwartz, laboratory director) and Prenatal Screening (Dr. L. Dickerman, laboratory director). In addition to directing the clinical service, the candidate will assist the Director of the Center, Dr. H. F. Willard, in all aspects of the Center's academic, research, and teaching activities. The candidate will be appointed at a senior rank in the Department of Genetics and an appropriate clinical department and will be expected to establish an active human genetics research program and/or to interact and collaborate with research faculty within the Center. The Center for Human Genetics maintains strong ties with clinical departments and programs as an essential part of its mission. The Clinical Director will have significant resources available for increased development of the clinical service, as part of a major institutional commitment to excellence in human and medical genetics.

Applicants should send curriculum vitae, summary of clinical, administrative and research experience, and names of three references (with contact numbers) to: **Dr. Huntington F. Willard, Director, Center for Human Genetics, Case Western Reserve University School of Medicine, Cleveland, OH 44106-4955.**

Case Western Reserve University is an Equal Opportunity/Affirmative Action employer.

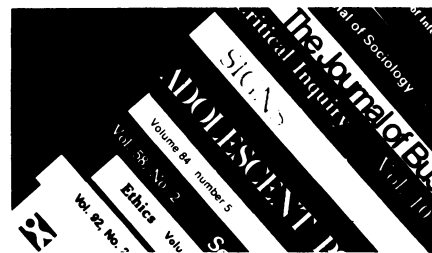

**Department of Genetics
Case Western Reserve University School of Medicine**

The Department of Genetics invites applications for up to four tenure-track positions at the Assistant Professor, Associate Professor, or Professor rank as part of a major expansion. Applicants should have demonstrated expertise and productivity in any area of classical or molecular genetics, with ability to develop a strong, independent research program. Existing laboratories in the department focus on the genetics of *Drosophila*, *C. elegans*, mouse, and humans. Areas of concentration in the department will be in developmental genetics, chromosome structure and function, genome organization and mapping, and the genetics of inherited disease. Planned expansion is supported by significant new resources, including 40,000 square feet of state-of-the-art research space in a new Biomedical Research Building scheduled to open in January 1993, with generous equipment and start-up funds provided by the Markey Center for Developmental Genetics and by the Center for Human Genetics. The Department of Genetics participates in the multidisciplinary Biomedical Sciences Training Program for Ph.D. students. Candidates will be expected to participate in the teaching of medical and graduate students. Strong interdepartmental interactions at Case Western Reserve University School of Medicine are encouraged and provide for an unusually supportive research environment and opportunity for achievement.

Applicants should send curriculum vitae, description of research plans, and names of three references (with contact numbers) to: **Dr. Huntington F. Willard, Chairman, Department of Genetics, Case Western Reserve University School of Medicine, Cleveland, OH 44106-4955.**

Case Western Reserve University is an Equal Opportunity/Affirmative Action employer.
